

FREIGHT MANAGEMENT AT ITS FASTEST

Introducing the Monarch™ and Dragonfly™ cargo clips, exclusively from BidBird.

At a Glance

BidBird's patent-pending cargo clip system* bundles shipping containers together to speed up picking time, enhance worker safety, and limit the risk of overboard losses—all while reducing the carbon footprint of ports worldwide.

*Currently being engineered by ABS Consulting.

The Monarch™

- Reduces picking time up to 75%
- Integrated lashing rods minimize trip hazards and the risk of falling objects

The Dragonfly™

- Reduces picking time up to 50%
- Multi-use clips help to reduce theft in freight well cars

Boost Productivity

Handle more cargo in less time. Ports service more ships per week, and operators gain additional sailing days.

Versatile Bundling

Two clip sizes allow bundling of 20-ft or 40-ft containers in groups of 2 (Dragonfly) or 4 (Monarch).

Sustainable

Reduced picking time = less energy used, improving carbon emissions on a global scale.

Fewer Inventory Days

Decreased DIO for customers, while port & ship operators make more money in the same amount of time.

Weather Security

Both the Monarch + Dragonfly clips improve stability to reduce the risk of overboard catastrophes in unfriendly weather.
